DETAILED ACTION

1. This action is responsive to the following communications: the Application and the Information Disclosure Statement filed on July 30, 2003.
2. Claims 1 – 15 are pending in this case. Claims 1 and 15 are independent claims.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 15 is rejected under 35 U.S.C. 102(e) as being anticipated by Kasper, U.S. Patent No. 6,526,451 B2 - filed Sep. 30, 1998.

Figs. 1 and 2 of Kasper discloses a composite memory device, comprising: a plurality of memory devices (Fig. 2 [70 and 72]) configured to operate individually; a memory bus (Fig. 2 [76]) configured to transfer data among the plurality of memory devices (Col. 6 lines 47-50); and a plurality of memory controllers (Fig. 2 [74]) configured to control data transfer operation between the memory bus (Fig. 2 [76]) and a memory device (Fig. 2 [70 and 72]) among the plurality of the memory devices (Fig. 2 [70's and 72's]) respectively, wherein the plurality of memory devices (Fig. 2 [70's and 72's]) are controlled by an external memory controller (Fig. 2 [80]) to exchange data

with an external system bus (Fig. 2 [80] and [HOST SYSTEM BUS INTERFACE]) (Col. 6 lines 47 – 53), and when one of the plurality of memory devices (Fig. 2 [(70 and 72) of port 0]) exchanges data with the external system bus (Fig. 2 [80]), the rest memory devices (Fig. 2 [(70 and 72) of ports 1 – 3]) are allowed to exchange data via the memory bus (Fig. 2 [76]).

Allowable Subject Matter

4. Claims 1 - 14 are allowed.
5. The following is an examiner's statement of reasons for allowance:

With respect to claim 1, in addition to other elements in the respective claim, the prior art fails to teach or suggest "a second synchronous memory device configured to operate in a page mode; a first memory controller configured to control data transfer operation between the first memory device and the memory bus; a second memory controller configured to control data transfer operation between the second memory device and the memory bus; and a third memory controller configured to control data transfer operation between the third memory device and the memory bus".
